Mobile Development Challenge 📱

📝 **Point System**: Collect **10 points** to win!

🔋 **Task 1: Static UI - A Gentle Start** 🥧 (7 points)

- **Challenge:** Stick to the basics—no dynamic content. Just focus on getting the layout and visuals right.

🌍 **Task 2: Interactive UI with State** 💡(10 points)

- **Challenge:**
    - Add form validation to the "Sign In" button (we don't want anyone booking a flight as "John Doe," do we?).
    - Toggle password visibility (let users see what they're typing, then hide it for security).
    - Ensure the screen scrolls smoothly when the keyboard appears.
- **Bonus:**
    - Add email validation when users click "Forgot Password." 🌐 (2 points)

🚀 **Task 3: Advanced UI - Only for Pros** ⭐ (12 points)

- **Challenge:** No external packages allowed (except for handling SVGs).
- **Bonus:** (5 points)
    - Make the tooltips draggable. Why? Because it's cool, and we like a bit of challenge.

🔗 **Here it is the Figma file:**   🎉 Good luck, wizard!
